CHILLER

Haier
Air Conditioning

Haier Brand Story

The Internet era is a diverse and unconventional time, where "one size fits all" products and solutions simply aren't enough. Customers want to be treated as individuals and respected for who they are.

Everyone wants their unique lifestyle acknowledged. That is why Haier listens closely to you in order to gain a genuine understanding of what is going on in your life and what is on your mind. So each of you can get the smart home experience you deserve: be it simple, sophisticated, organized or enjoyable.

As a worldwide industry leader, Haier innovates beyond products and solutions and turns the organization into a wholly connected platform. In doing so, internal and external resources are connected quickly and easily. We believe only by doing so, we can best meet our consumers' expectations in this rapidly evolving world.

Be part of the Haier Network. Create new possibilities.

Haier Global Network

From introduction to absorption, from manufacture to creation, Haier has been accomplishing goal of creating a world-renowned brand step over the past 30 years. Haier boasts 66 trading companies, 10 design R&D Centers, 108 manufacturing bases and 24 innovative industrial parks across the world with a global selling network comprised of 143,300 sales outlets spanning more than 100 countries. With more than 73 thousand employees worldwide, Haier has now established a "Three in one" network layout.

Haier Global Revenue

Established in 1984, Haier is the world's **No.1** major appliance brand.

Steady growth has been achieved due to Haier's exploration of IoT business models. From the income generated by the conventional economy, Haier is expected to see its 2016 global revenue hit RMB **201.6 billion**. Online transaction volume, which reached RMB **272.7 billion**, was generated on Haier's product online platforms, B2B, B2C socialized online platforms and internet finance platforms, representing a **73%** year-on-year increase.

Haier

The First Commercial Air Conditioning Smart Interconnected Factory in the World

Till the end of October 2016, Haier commercial air conditioning smart interconnected factory was officially completed. This is the 8th interconnected factory of Haier, and is the first commercial air conditioning interconnected factory in the world. This factory has the production capacity of 10 types of commercial air conditioning products, takes advantages of the whole process information interconnected system, smart manufacture and smart detection and other technologies, redefining the manufacturing standards of commercial air conditioning industry, to meet the increasing market demand, leading the commercial air conditioning users into the era of personalized customization.

The **8th** interconnected factory of Haier

Project covers an area of **87,000 m²**, whose building area is **51,000 m²**

Have the production capacity of **10** types of commercial air conditioning products

Equipped with **8** final assembly lines and **4** modular areas

Maxium production & testing capability of **4500** tons

Overall energy saving reaches to **20%**, to create industry benchmark factory

Haier

Redefining manufacturer's standards, bring forth new ideas and lead industry to upgrade

The first large-scale customization interconnected factory

Haier's interconnected factory was born to meet the personalized needs of users. Through the front end of the interconnected factory to collect the fragmented demand of users, and flexible production is realized through smart manufacturing, which can solve the natural contradiction between mass production and personalized customization.

The first whole-process transparent interconnected factory in the world

The way Haier interconnect factory links to users is the visual production. Haier commercial air conditioning initiatively created the whole-process information interconnected system, by total factor and the end-to-end system to realize mass customization, and finally achieved the seamless, transparent and visualized user experience. Through real-time, accurate data, to meet the visualization demands of the lowest level information from the whole plant and even the global plants.

leading the whole ecosystem big data system in the industry

Haier commercial air conditioning smart interconnected factory is not a concept of a factory, but an ecosystem of multiple inner and outer circles. This ecosystem realizes real-time interconnected of the whole processes for users, they can participate in all processes from the design, manufacture, at the same time make zero distance from the user to the plant. The orders are sent directly to the factory, reducing intermediate links between the production and the order processing, and customized products can be directly delivered to the user.

Haier

For ten years, Haier created history with
Magnetic Bearing Centrifugal Chiller, starting
the era of oil free in China.

2003

The first magnetic bearing compressor was born in the world

2006

The first true-meaning high temperature Magnetic Bearing Centrifugal Chiller

2009

The first Haier magnetic bearing centrifugal water source heat pump

2011

The first air-cooled magnetic bearing centrifugal chiller in Haier China, whose energy efficiency is over 8% of the state level one energy efficiency

2013

The first modular magnetic bearing centrifugal chiller in China appeared on the market, small enough to saving space, applying to renovation projects

2014

The large cooling capacity of 2,210 tons magnetic bearing centrifugal chiller appeared on the China market.

2015

The first magnetic bearing centrifugal chiller with failing film evaporator in China

2016

Air-cooled magnetic bearing centrifugal chiller with free cooling shocked the China market

OIL FREE CENTRIFUGAL CHILLER

Magnetic Bearing Centrifugal Chiller

Low Cost

Low maintenance cost

The unit adopts no oil in the chiller, so no oil contamination over time, and design efficiency is maintained effortlessly. This design can save maintenance costs during the life cycle, as there is no need to clean oil filters or remove oil deposits .

High Reliability

Longevity

Compressor is made from the aerial class aluminum mold and the high strength thermal plastic electronic case, which can keep the compressor long-time and high efficient running.

Aerospace materials and technology, ensure reliable efficient operation.

The moving parts adopt aviation alloy material, which ensure unit reliability and longevity.

Aerospace equipment Intelligent multi-level reliability control which ensure unit can automatic processing the problems in the operation in any case, such as the case of power failure etc...

Aeroengine turbine design technology.

Compressor safe operation

Compressor control module will supply the performance curves and according to the curves, adjust the running speed in time to ensure the compressor running safely.

Comfort

Low noise and less vibration

Because of fully frictionless operation, the device vibration is close to zero. So Haier magnetic bearing centrifugal chiller doesn't need the anti-vibration parts and water-cooled chiller's running noise is lower than 75 dB(A), while the conventional chiller is higher than 85dB(A).

Flexible capacity adjustment

When condensing temperature goes down or the heat load is decreased, the compressor speed will be slower. The system controls the refrigerant output from 5%-100% of the rated load freely, optimizing the compressor efficiency.

Convenience

Friendly operation screen

Big LCD touch screen. Chinese and English are selectable
Calendar / Fault inquires / Water system equipment interlocking / Remote control / Unit operation parameters quick inquiry

Magnetic Bearing Centrifugal Chiller

Advanced Technology

Compressor technology

- **Turbocor compressor technology**

The chillers either water-cooled or air-cooled, are designed to optimize the performance of the high efficient Danfoss Turbocor oil-free centrifugal compressor technology.

- **Magnetic bearing technology**

Magnetic bearing and orientation sensor: Two radial bearings and one axial bearing compose the digital magnetic bearing system. The movement parts are made of permanent magnet and electric magnet will suspend on the magnet and move without friction. The orientation sensor will confirm the precise position of the rotor at max. 6,000,000 times per minute.

- **Permanent-magnet motor and Landing bearing**

The compressor motor is magnetic permanently, which is supplied voltage by PWM (pulse width management) to realize variable speed running. The landing bearing will go upward before the unit starts up, which will keep a certain distance automatically and ensure no friction.

The radial bearing is to bear the axis after the compressor is powered down, to avoid the touch between the axis and the other metal surface.

Advanced Technology

Compressor Technology

- **Inverter driving**

The inverter centrifugal compressor adopts the integrated driving module. on the condition of condensing temperature decreasing or load reducing, lower the compressor revolution, then optimum the compressor energy efficiency with 5%~100% of rated load.

Optional: digital load balancing valve, compressor even can work normally even when the load almost closes to 0.

- **Frictionless system**

The movement parts of magnetic bearing system centrifugal compressor are composed of two radial magnetic bearings and one axial magnetic bearing. So the digital magnetic bearing system will be suspended when compressor is running. The movement parts do not need oil, which avoid that oil film in the heat exchanger lays on the pipe to reduce the heat exchanging efficiency. Thus it will ensure the product has the consistent excellent performance in its operation period.

The oil content of old type chiller is 9% on average, which will reduce the efficiency up to 15% to 20%. Haier's magnetic bearing system inverter centrifugal chiller can enhance efficiency over 15% because of oil-free lubrication system.

Magnetic Bearing Centrifugal Chiller

Advanced Technology

High efficiency heat exchanger

The water-cooled and air-cooled magnetic bearing centrifugal chillers adopt shell and tube flooded evaporator and shell and tube condenser. The heat exchange tube adopts special layout make refrigerant flow improvement in the evaporator and the condenser to increase efficiency.

The modular water-cooled magnetic bearing centrifugal chillers adopt falling film evaporator to reduce the refrigerant charge by 40% and increase the heat exchange efficiency by 10%.

Fall film type

Refrigerant liquid film lays on copper evenly, air is separated from liquid perfectly to increase heat exchange efficiency greatly.

EXV design

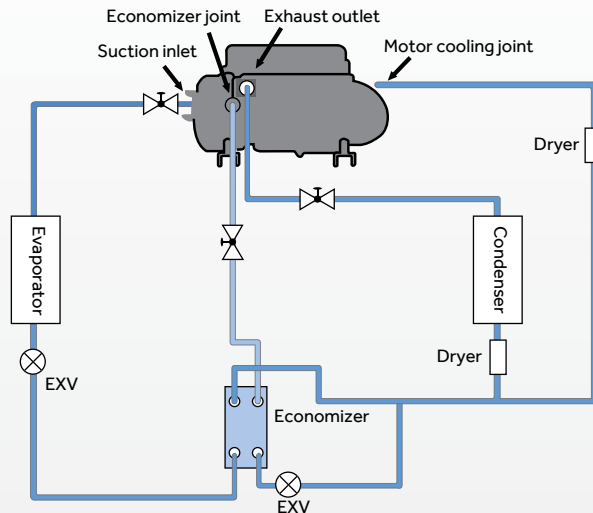

The unit adopts electronic expansion valve to control the volume of liquid refrigerant spraying into the evaporator precisely. By controlling the stepping motor operation due to the different load, the special electronic expansion valve driving module can adjust open degree of valve to control refrigerant flow volume, reaching the optimum efficiency.

Advanced Technology

Economizer

The chillers are added with the economizer, which can improve degree of supercooling greatly, increasing efficiency by 10%.

Intelligent control

- Cloud services center

Haier magnetic bearing centrifugal chiller with built-in smart network communication module, just by an Internet cable Internet the user can upload unit operation parameters, the fault information to the client end and Haier smart cloud services system. Enjoy the 24-hour butler service provided by Haier's smart cloud service system.

Long-distance detection: detect each parameters of unit operation on real time, and accumulate the data and make it in diagram. Improve the work efficiency of checking and recording personnel in the air-conditioner room, reduce the workload of the management personnel in the air-conditioner room, to achieve the goal of simplifying air-conditioner room or unattended air-conditioner room.

Default warning: the system can monitor the unit operation conditions constantly, and send alarm information to the cloud services system or mobile terminals with relevant authorities, notify the administrative staff of the air-conditioned room to quickly check and maintain it. Avoid the failure of the unit and reduce the failure rate of the unit.

Energy saving service: record and analyze the energy consumption data of unit and system, to provide optimized energy saving strategies and using methods for users.

Air Cooled Magnetic Bearing Centrifugal Chiller

Air cooled/Cooling only
Cooling capacity range from 350kW up to 1760kW

* Picture is based on single compressor model

Options / Accessories

Accessories	Standard	Optional
Power supply	3/400V/50Hz	-
Cloud service	Yes	-

Chiller Water System And Control Wiring Diagram

 Water pipe and control wiring connection diagram for multi-modular chiller

Control Wiring Diagram

 For example the model CA0070AAND

Air Cooled R410a Heat Pump Modular Chiller

Features

1 Compressor

Best scroll compressor, low sound power level, high EER.

2 Air cooling side heat exchanger

Haier modular chiller enlarge the heat exchanging area with 5%, bigger than normal modular chiller, increase EER.

3 Motor

Low sound power level axial fan, together with the high efficient motor, making higher efficiency and lower sound power level.

High efficient parts and unique design ensure the chiller high efficiency EER up to 3.39(R410a Series).

Easy Installation

Compact design, reduce footprint

New Y-shape design, small floor area, only 1.56m², 28% footprint reduction.

Standard flow switch

Standard flow switch in the product, installer no need to purchase a flow switch.

Wide Application

Wide temperature operation range

- -15°C in heating, 50°C in cooling.

- Water outlet temp up to 55°C

High Reliability

Shell & tube heat exchanger

The new modular chiller adopts shell & tube heat exchanger(65/100/130kW) avoid dirty fouling, higher efficiency and reliability.

Filter drier

Filter drier,absorb moisture in the system, and filter the refrigerant from impurities.

Pressure sensor control

Through the pressure sensor real-time monitoring, can be achieved quickly, accurately, ensure the unit operates most efficient and stable.

Three phase fan motor

Three phase fan motor: low starting current, high speed and more stable, when compared with single phase.

Air Cooled R410a Heat Pump Modular Chiller

High Reliability

Backup operation function

Sixteen modules can be connected in one system . If one module malfunction another module will start automatically according to the water temperature.

Safety and protection

Phase reverse protection, high and low pressure protection, freeze protection, overheat protection, overload protection, etc.

Comfort

Accurately control water temperature

EEV adopts PID control, accurate control refrigerant distribution, outlet water temp. $\pm 5\%$ of the set temperature .

Water System Installation Sketch

Model	Description	Model	Description
	Check valve		Water pump
	Automatic exhaust valve		flexible connection
	Water filter		Expansion tank
	Stop valve		Electronic water processor
	Thermometer		3-way valve
